

School Bus Counting Game

This fun game can be played two different way, depending on your age group. For younger children, roll a die and for the number they get, they can put the same number of counters on squares. For example, if she rolls a four, she puts a counter of each of four squares of her choice. For older children, they will place a counter on the number they roll. For example, if they roll a four, they will put one counter on the number four.

They keep taking turns until one has filled their whole card.

Laminate for further use.
